EDUCATION

Arab International University

2021 - 2025

BS in Informatics Engineering (AI)
Relevant Coursework: ML, Deep Learning, Computer Vision, DB Systems.
GPA: 3.06/4.0

Syrian Virtual University

2026 - Present

Master of Web Science and Artificial Intelligence (MWIS)

Syrian Virtual University

2021 - Present

Information Technology Engineering (ITE)
Specialization: Data Science
Concurrent studies, currently in the fourth year of a five-year program.

University of the People

2023 - Present

BS in Business Administration
Concurrent studies to develop comprehensive business acumen.

TECHNICAL SKILLS

LANGUAGES

Python, JavaScript, TypeScript, SQL, C++, Java, C#

AI & GENAI

TensorFlow, Keras, Scikit-learn, Generative AI, LLMs (Gemini), RAG, Multi-Tenant RAG, Multi-Agent Systems, NLP, Computer Vision, Hugging Face Transformers, Recommender Systems

WEB

Next.js, React, FastAPI, Flask, Tailwind CSS, GSAP

TOOLS & MLOPS

Docker, Git, GitHub Actions (CI/CD), Vector Databases (ChromaDB), REST APIs, JWT Auth, n8n, apify, AutoGen, Supabase, Vercel

LANGUAGES

Arabic Native
English Professional

CERTIFICATIONS

Meta Front-End Dev
Coursera (6/9 Courses Completed)

Cert. in Marketing
UoPeople | Apr 2025

Front-End Track
1M Arab Coders & Udacity | 2020

MHD ZAID AL NAHHAS

AI DEVELOPER & INFORMATICS ENGINEER

PROFILE

AI Engineer specializing in multi-agent systems and AI-driven automation, with experience building marketing intelligence platforms and recommendation engines processing 300k+ listings. Designed chatbot architectures and GEO evaluation tools. Currently pursuing a Master's in Web Science & AI.

PROFESSIONAL EXPERIENCE

AI Engineer

Feb 2026 - Present

beno.com (UAE - Remote)

- Co-designed a WhatsApp chatbot platform architecture, translating user stories into scalable conversation workflows serving multiple business clients.
- Engineered tool-augmented reasoning for an AI marketing platform, enabling agents to autonomously analyze external signals and generate data-driven campaign strategies.
- Co-developed a GEO assessment platform scoring website content across structured frameworks using LLM-based evaluation, improving SEO audit turnaround.
- Built core platform infrastructure — JWT authentication with tenant-scoped permissions, a modular API layer, and multi-tenant architecture — enabling one platform to serve multiple business clients.

AI Engineering Intern

Sep 2025 - Jan 2026

beno.com (UAE - Remote)

Automated Lead Generation Pipeline (n8n & Python)

Stack: n8n, Python, Reddit/X API, Hub-and-Spoke

- Designed a platform-agnostic **Hub-and-Spoke architecture** for "plug-and-play" integration of new social sources without touching core logic.
- Built modular adapters for social APIs (Reddit, X) to automate lead capture and interaction.

Multi-Agent Marketing System (AutoGen & Python)

Stack: Python, AutoGen, Gemini, Planner/Renderer

- Engineered an autonomous multi-agent system covering the full marketing lifecycle, from strategic planning to final asset production.
- Applied a **Planner/Renderer pattern**, decoupling strategy from execution as specialized agents debate and drive high-fidelity content generation.

PRODUCT & PLATFORM ENGINEERING

Additional full-stack, web, and QA contributions across beno.com's product portfolio.

Prime — Multi-Brand Rental Platform

2026

Full-Stack & QA Engineer | Next.js | Rental Car · Yacht · Desert Camp

Built vendor/admin dashboards and scaled programmatic SEO across brands; ran recorded black-box QA on phased releases before deployment.

BENO Watersports — Immersive Marketing Website

2026

Front-End Engineer | Next.js, GSAP, Vercel | [Live Site](#)

Built and deployed a scroll-driven, video-based marketing website with scroll-triggered animations and interactive effects.

ACADEMIC & PERSONAL PROJECTS

TrustAsset: AI-Powered Real Estate & Vehicle Marketplace

Feb 2025 - June 2025

Graduation Project · AI Developer (RecSys) | Code: [Property RecSys](#) · [Vehicle RecSys](#)

Core AI Engineering: Engineered recommendation engines for a dual-vertical marketplace, solving "cold start" and data sparsity using Deep Learning and Hybrid Filtering.

- Deep Learning Property RecSys:** Trained a Deep Learning Autoencoder on 300k+ listings to generate "Property DNA" embeddings for visual similarity recommendations.
- Hybrid Vehicle RecSys:** Combined k-NN with content-based filtering to mitigate data sparsity, ensuring accurate suggestions with limited interaction data.
